

## Glenn Allen      SAP specific accomplishments at Boehringer Ingelheim

**Reports**      Build and maintain ALV reports for the following: Pick List Report, Maintenance Order Report, Scheduling Reports (IW37 and IW38), Labor Utilization Report, Collector Detail and Summary Report. Transport reports with variants, layouts, and tree location.

**Interfaces**    Modify custom business object ZLDLIKP to send delivery information to a Red Prairie WMS system. Investigate idoc DELVRY03 for use in the interface.

**Conversions**   Build conversion program for loading batches and inventory using bapi's BAPI\_BATCH\_CREATE and BAPI\_GOODSMVT\_CREATE. Allow user to choose files from the presentation server or the application server.

**Enhancements**      Build function to update a custom material availability flag stored on the work order (IW32) by determining if all of the material is available and then calling CO\_IH\_USERSTATUS\_SET to update the status accordingly. Modify user exit ZXMBUCU01 from MIGO (goods issue) to call the function as a background task.

Modify

user exit ZXWOCU07 from IW32 to call the function as a background task in order to reverse the flag in case more material is added to the order. Modify user exit ZXMBUCU08 to call the pick list form from transaction MB21/MB22. Investigate and test user exits within the invoice processing stream looking for an ideal point to send out invoice information.

**Forms**      Create smart form and smart styles to generate an order confirmation form.  
Modify smart form to add a tax line to the invoice. Create sapsript for custom pick list.

**Mentoring**    Mentor and train employees learning ABAP.
